

Swimming pool Acquafun

Design, materials, finishing, functionality: everything is combined in order to give the utmost reliability and to entertain kids.

A little ladder lets kids reach a chute where water flows and lets them slide funnily in the swimming pool with the Acquafun.

The swimming pool can be installed both outdoor and indoor.

also with soft balls

- > Since the very first days of their life, kids can get in touch with water and obtain great benefits (as paediatricians suggest).
- > The pool, instead of water, can be filled with soft and multicoloured balls, and kids can slide into the pool completely dressed without shoes.
- > Acquafun system, beside improving kids sliding towards the pool, lets also water reoxygenate naturally (6 refills per hour).
- > A covering cloth exists: easily mountable it prevents the use of the pool by the kids without parents permission. It also allows rain water to filtrate but hinders the trespassing of leaves and insects.

- > Pool: 1200 x 2100 mm - height 420 mm
- > Material: linear high density mass coloured polyethylene, uv rays stabilized, 100% recyclable
- > Flood gate for water emptying.
- > Available in many different colours.
- > Acquafun system with 12 volts pump for water recycle, activated by the control panel.
